

**WHY IS DOUG FORD
TURNING HIS BACK
ON RENEWABLES
WHILE THE WORLD
GOES GREEN?**

ONTARIO IS MOVING IN THE WRONG DIRECTION

With the world on fire, the Ford Government is ramping up the use of **climate-**

wrecking fossil gas and wasting billions on **expensive and risky nuclear** power projects, pushing up our electricity costs.

Ontario needs to stop ignoring the rapidly growing threats of **climate change**. And right now, our province is set to miss out on the **huge economic opportunities** that are being created in the renewable energy sector.

While the world transitions to **renewable energy**, the Ontario government has not contracted for a single kilowatt of solar or wind power during the past five years.

COSTS FOR WIND AND SOLAR POWER HAVE PLUNGED DRAMATICALLY IN RECENT YEARS. **THESE ZERO-CARBON POWER SOURCES ARE NOW OUR LOWEST COST WAY TO MEET OUR ELECTRICITY NEEDS**

Ontario has huge untapped, **low-cost renewable** power potential. **Offshore wind** power in the Great Lakes alone could meet ALL our electricity needs!

And by cooperating with our neighbours in Quebec, we can **store** large amounts of power in their massive hydro-electric reservoirs – essentially a giant green battery.

Wind and solar power – combined with energy **efficiency, water power and storage** – can **lower** our electricity **bills**, create more **jobs**, and produce all the **clean electricity** we need for our homes, offices and industries.

TELL PREMIER DOUG FORD:

Invest in Made-in-Ontario wind and solar – to lower our electricity bills and create good, green jobs.
